

## Patch Release 41.0.1.0

The *PostalOne!* system Patch Release 41.0.1.0 is scheduled to be deployed May 19, 2015 to introduce software fixes to the system. This includes corrections to issues previously identified in a prior release.

These Release Notes provide the contents of the release and affected subsystems.

Contents of this document are subject to change.

# 1. External Trouble Reports (ETRs) and Engineering Change Requests (ECRs)

## 1.1 Electronic Verification System (eVS)

eVS postage statement processing has been updated to correct an issue that previously resulted in a display issue on Priority Mail International postage statements (PS Form 3700). Users were unable to view Priority Mail International postage statements that included single-piece Priority Mail in Part E Group 1, Group 2 or Group 3. This was a display issue only and postage was calculated correctly. [7253 {B}](#)

## 1.2 Full-Service MicroStrategy Reports

- Processing of eDoc submitter barcode scan rate data has been corrected to enable this information to be properly stored and updated in the MicroStrategy database. A defect introduced in the *PostalOne!* release deployed on May 17, 2015 failed to remove duplicate records from the table used for eDoc submitter barcode scan rate data. The issue prevented further updates to the table, including the update intended to resolve the creation of duplicate records. As a result, eDoc submitter barcode scan rates on the Mailer Scorecard Seamless tab and the Barcode Scan Rate drill report continued to be incorrectly inflated for jobs spanning multiple mailing dates and finalization cost centers. [7251 7021 {B}](#)
- The MicroStrategy process to extract undocumented piece scanning data has been updated with this release. Prior to this release, an error prevented the extract from completing, leaving a portion of the undocumented piece scan data out-of-date. As a result of this issue, the MicroStrategy Undocumented drill report did not match the Mailer Scorecard. [7261 {B}](#)
